

CYBERSECURITY SOLUTIONS

Member-exclusive \$999 cybersecurity package that provides practical, affordable protection built for small businesses—without complexity or headaches.

Cyberattacks are no longer just an enterprise problem. In fact, 43% of all cyberattacks target small and mid-sized businesses, yet nearly half don't know where to start when it comes to protecting themselves.

With limited time, budgets, and in-house expertise, many organizations are left exposed—often without realizing it—until an incident disrupts operations, damages trust, or creates costly downtime.

To help Michigan's small businesses take proactive, manageable steps toward better protection, SensCy offers an exclusive cyberhealth assessment and monitoring package designed specifically for you.

\$999 Annual Subscription

External Vulnerability Scanning (Up to 50 IPs)

- Shows you exactly how your business appears to attackers from the outside.
- Continuously monitors internet-facing systems like servers, firewalls, and remote access points, external vulnerability scanning identifies known weaknesses, misconfigurations, and outdated software before they can be exploited.
- Helps you reduce your attack surface, focus remediation efforts, and avoid preventable incidents.

Dark Web Monitoring

- Looks for exposed credentials, leaked data, and early indicators that attackers are targeting your organization—places traditional tools can't see.
- If employee credentials or company data appear in underground marketplaces or breach repositories, you're alerted quickly so you can take action before stolen access leads to ransomware, fraud, or account takeover.

SensCy Score™, Your Personalized Cyberhealth Assessment

- A fast, 30-minute cybersecurity assessment that gives you a clear, measurable view of your organization's cyberhealth—similar to a credit score for cybersecurity.
- Evaluates key technical, human, and process-based risk factors and translates them into an easy-to-understand score and prioritized guidance.
- Instead of guessing where to invest time or resources, you gain a clear starting point and actionable insight to reduce real-world risk.

Getting Started Is Easy

No lengthy onboarding. No complicated setup.

Simply register at senscy.com/sbam-member-exclusive to get started. From here, a SensCy cybersecurity professional will take the lead—guiding you through a brief, 30-minute conversation to conduct your cyberhealth assessment and activate your external vulnerability and dark web scanning. Once activated, monitoring runs continuously in the background throughout your subscription, giving you ongoing visibility into risk without adding work to your plate. All for just \$999 annual subscription.

Simple. Proactive. Built for small business.
