Technology is useless if it’s not secure.

Security today must be thought of in terms of "when" rather than "if". The truth is that security incidents are inevitable as cyber-criminals, hacktivists and foreign adversaries become increasingly sophisticated. Is your company prepared?

SBAM’s vetted expert, NuWave Technology Partners, understands that our members depend on technology to run their business. They also understand that many of our members hold and process sensitive information that needs protecting.

NuWave Technology is here to help by guiding you to the best solutions for your business.

Your Small Business Is At Risk!

Your business is a target. Right now, cybersecurity threat actors are phishing for weak spots in your business infrastructure and will attack without warning.

- 43% of cyber-attacks target small business.

- 60% of small companies go out of business within six months of a cyber-attack.

- 48% of data security breaches are caused by acts of malicious intent. Human error or system failure account for the rest.
SBAM Cybersecurity Risk Assessment Tool

Do you know where your weak spots are in your company’s computer network systems?

With cybercriminals evolving their techniques by the minute, learning your biggest areas of exposure has never been more important.

SBAM makes it easy and affordable for you to determine where you can potentially be attacked and how to prevent it.

The SBAM Cybersecurity Risk Assessment is a series of questions and weighted answers that will help you find the gaps in your business that make your company vulnerable to cyber-attacks. Based on your results, you’ll receive a report about your cybersecurity risks.

If you have an IT person, make sure they’re in the room with you, as some of the questions will require their knowledge of your IT system. The assessment is not a replacement of your IT staff, in fact, it should only increase their value to you.

Taking the assessment should take no more than 20 – 30 minutes of your time.

Upon completion of the assessment, you will get a summary report — a heat map that shows where your system is most at risk for a cyber-attack. This heat map also comes with specific advice and recommendations for improved security.

Work with your IT person to “plug the holes” one by one. Once you have made adjustments, repeat the assessment again to mark your progress.

The cost of SBAM’s cybersecurity assessment breaks down to only $24.99 per month, and you can take the assessment as many times as you would like in 12 months. Compare this to other less customized risk assessments that cost more than three times this amount.

NuWave Technology Partners

You didn’t go into business to be an expert in information technology. But NuWave certainly did! Their goal is to have the technology that powers your business so well that you don’t even have to think about using it.

Their team of IT experts, based right in the heart of Michigan, is dedicated to giving every customer the best possible experience. NuWave aligns their security and compliance practices to the National Institute of Standards and Technology (NIST). They offer services that are tailored to meet your specific needs. Everything they offer is designed to keep your daily operations running smoothly.
Managed Services

Your business runs on technology and you need solutions that just work! Whether you’re an enterprise with an in-house IT team or a small business looking for big options, you need technology solutions that won’t get in your way. Our number one goal is to provide all of our clients with real-world services that are simple, secure, and reliable.

Who Can Provide Computer Support That Is Simple, Secure & Reliable?
Whether you have an in-house IT department or you’re a small business with limited resources, we’ve got your back. NuWave’s proven process starts with understanding your vision to build and manage an IT strategy that supports your organization. This results in solutions that meet your specific needs and are simple, secure, and reliable. We enjoy working with organizations of every type, which is why we offer both co-managed and fully-managed options.

With NuWave’s Proven Process, You Can Kick Unpredictable Expenses To The Curb
After decades of collective experience, NuWave has seen great organizations grossly overspend attempting to solve their IT problems and execs struggling to single-handedly try to manage their own networks.

NuWave offers a proven process that pays careful attention to the six strategic priorities to creating IT peace of mind:

- Planning and budgeting
- Healthy infrastructure
- IT quality
- Risk management
- Security
- Operational effectiveness and efficiency

Your Choice: Fully Managed or Co-Managed
Whether you have an in-house IT department or you’re a small business with limited resources, they’ve got your back. NuWave’s proven process starts with understanding your vision to build and manage a strategy that supports your organization. They provide simple, secure, and reliable solutions that meet your specific needs.

Cloud-Based Services

Whether it resides in NuWave’s Cisco based private environment, or their world class public cloud ecosystem, NuWave Connect is a powerful cloud computing solution that allows you and your team to be productive from anywhere.

**It’s secure:** By letting NuWave help you with a Solution Based Architecture, your applications and your data are securely available to enable your productivity from anywhere with any device with an internet connection. This is real business continuity with real security.

**It’s scalable:** Their Cloud solutions expand and contract with your business, staying as highly flexible as they are highly available. When your future growth arrives, they will always be ready.

**It’s relevant:** NuWave Connect is always up-to-date, so you never have to worry about outgrowing it like you would with those continuously aging technology tools. Likewise, concerns over your technology ever being considered “end of life” or no longer supported are a thing of the past.
